Changes to DMIRS Links For Tenements ESRI shapefiles used in GeoMap Projects

1.0 Reason for the ‘How To Get and Use Update Tenements App’ Training

Department of Mines and Petroleum (DMIRS) have changed their download link for downloading the Tenement Shape Files which will impact vs3.0 of the Free Tenements Updater App we have provided to you.

This will have several impacts.

- The main one being that when the location of the Tenements you use in GeoMap Projects is changed by DMIRS the “Download Tenements” app will not work as it will be point to the wrong Website location. That will Happen in June or July this year 2022.

- This will mean your GeoMap projects will have **out of date tenement** information unless you manually download tenements zip files and then unzip them to the correct folder.
- You will need to download the new Version 4.0 Download tenements app in order to.
 - Click on it, to automatically go to DMIRS website and get the download tenements zip file,
 - download the file to your pc,
 - unzip the file into the correct tenements folder,
 - so that your projects are all updated with the new tenement information.

If you use our Gold Prospecting WA “Download Tenements” APP provided at Seminars or free at APLA and other workshops - and you have not been contacted with a separate email please use the form here <http://www.gold-prospecting-wa.com/Contact-us.html> and I will provide the information on how to change the download APP.

2.0 - Process in a Nutshell

- (1) **Delete the old App Version you have on your PC which should be Vs3.0. Delete the Ikon shortcut link**
- (2) **Download the Vs4.0 Tenements updater app exe file.**
- (3) **Test it to ensure it is working.**

Please note: The Download Tenements APP will not work for you unless you have the standard folder and files setup as we teach in our Gold Prospecting Seminars or at our Free training at Seminars and with APLA.

If you do not have that setup on your PC this information will not be relevant to you.

3.0 Simplification and Standardisation of the “Downloading Tenements” Process for Users

In order to simplify the process of downloading tenements for people to use GeoMap, we have a standard folder and files system that we set up and populate with data on their laptops, including standard Master Projects and created a “Download Tenements” APP that; (if the user is connected to the internet)

- Links to the DMIRS data and Software system,
- Finds the correct download shapefiles for Mining Lease Tenements,
- Downloads the File and inserts it to the correct Standard Folder in C:/ Drive , (C:/Geo-MapData/Tenements/tenements.*)
- Unzips the files in the correct folder.
- Projects are created where the Tenements data is pointed to in this folder.

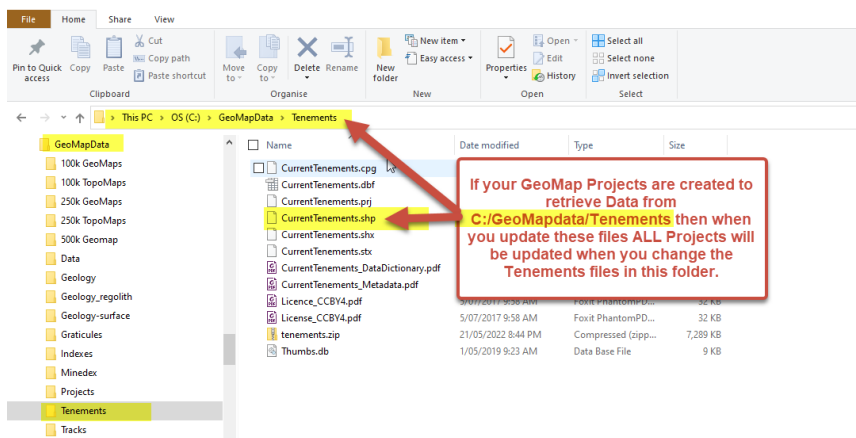

GeoMap Training WA – DMIRS Change – Update Tenements App Vs4.0

- When the Project is opened next it has the updated tenements included.

Then, when any project is opened such as the Master Projects and Projects that people have created, the Project automatically finds the latest files that the user has downloaded and inserts those tenements into all their Projects.

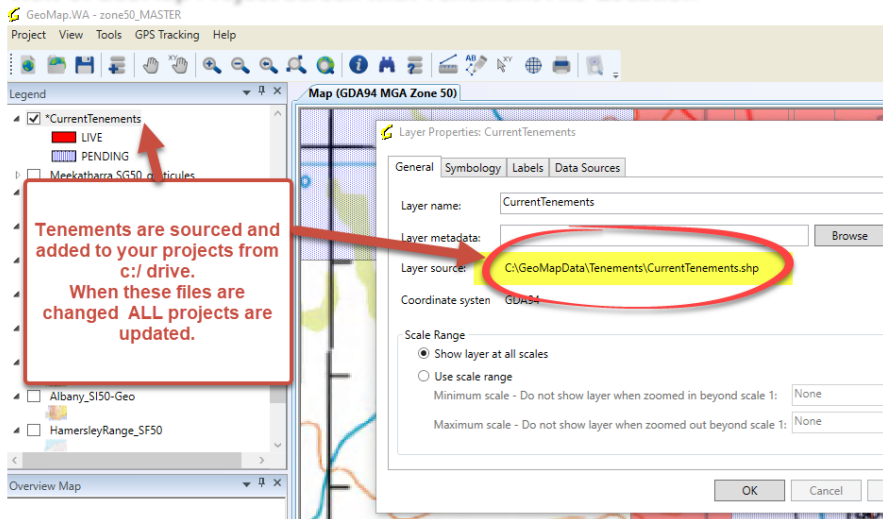

This ensures that “Up to Date” tenements are always displayed on the users GeoMap projects - provided they have clicked on the download tenements APP.

Location of Tenements in GeomapData Folders

View of Geomap Project with Tenement Data Source

View of GeoMap Project Screen with Tenement File Location

Vs4.0 of the Update tenements App ensures the tenements are downloaded and unzipped into the correct folder that your GeoMap projects are sourcing them.

The Vs4.0 App New Icon

Where to get the new version exe file

The vs4.0 Download tenements File is Here – click on the download link to download to your pc

[Click to Get The Vs4.0 Download Tenements App .exe File](#)
